2. Reason of change Packing Specifications

The packing material (ink marking on a tube) of the target products is including mineral oil (MOAH) more than 1wt% which are restricted by France Law for packing material control. Therefore, to keep compliance for this France Law, we would like to change the packing specifications to use new material which is not included mineral oil (MOAH) in a tube (Inkless tube will be newly used).

We appreciate your understanding and cooperation.

3. Change of Packing Specifications

As attached figure, Type-A tube is changed (ink tube is replaced to inkless tube).

For this PCN, Type-B tube is not changed because this type of tube complies to France Law.

□ Current Tube
